

• Category and Product form

is a general-purpose cleaner with disinfecting effect.

• Composition

Ortho-phthalaldehyde.

• Indications, Dosage and Administration

Virokill® is indicated as a general-purpose cleaner with complementary disinfecting effect on setters, hatchers and other farming facilities/installations. It is mostly effective against *Pseudomonas aeruginosa*, *Salmonella* spp, *Staphylococcus aureus*, and *Aspergillus niger*.

• Characteristics

Virokill® main characteristics are:

- it is nonirritant.
- non-corrosive.
- non-explosive.
- Its formulation does not comprise any carcinogens and it does not generate dioxins or furans.

• How to use

As a surface cleaner, apply undiluted Virokill® directly to the surface.

For disinfecting on single use, fumigate product at a 5 ml/m³ dose. After burning, keep the room closed for 20 minutes.

For continual hatchery disinfection, apply product via automatic system. Apply 40 ml of a 10% solution every 30 minutes.

• Storage

Product shelf life is 24 months from manufacturing date and it must be stored at room temperature.

• Packaging

1 liter bottles, 5liter gallons, 1 liter bottles.
