

Composition Bentonite | Activated Charcoal | Yeast cell wall

Target Animal

Poultry, livestock

Indications

Toxicut[®] is a mixture specially designed for animal feedstuffs. The ingredients bind to mycotoxins to reduce the negative effects of mycotoxins in feed on animal performance. Toxicut[®] is composed of the yeast cell wall combined with hydrated alumina-silica and activated charcoal. These ingredients are known for their efficient binding of aflatoxin and significant level of other mycotoxins. Also, there is a synergistic effect of combining these elements. Moreover, very small particle size provides a large surface area for maximum binding capacity.

Dosage and Administration

Poultry: 1-3 kg per ton of feed.
Cow: 25-50g /cow per day

Contraindications

None

Withdrawal period

None

Storage

/ Keep it in dry and cool place.
/ Keep the bags closed when not in use.

Precautions

Keep out of reach of children.

Packaging

25 kg bag
