Creamax GAA®

Feed additive to provide Additional energy for increase the body weight and improve the production

For veterinary use only

Composition

Each kg of product contains:

Guanidinoacetic acid 960 g

Target Animal

Poultry

Indication

- Creamax GAA® reduces feed intake and improves feed efficiency (FCR), increases body weight gain (muscle meat yield), improves general health of the herd, reduces mortality and increases herd performance.
- In breeders, it increases the hatchability, reduces embryo mortality, increases the growth and improve feed conversion ratio of chickens.
- Creamax GAA® in roosters, it improves sperm quality and increases fertility.
- It can replace arginine, to compensate the side effects of arginine deficiency in poultry diet.
- Creamax GAA® is the only precursor of creatine in the body and supplies necessary muscle energy so that, essential amino acids like methionine, are mostly used for growth and production. Therefore, total feed cost will be reduced.
- Creamax GAA® reduces oil consumption in poultry diet by increasing creatine production, optimizing energy storage, minimizing metabolic energy losses, decreasing the energy requirement of fat, FCR improvement, increasing nutrients digestibility and absorption, reduction of oxidative stress and maintaining growth performance in low-fat diets.

Dosage and Administration

Poultry: 600 - 1200 g per MT of feed.

Contraindication

None.

Withdrawal period

None.

Storage

- Keep the unopened original packaging in a cool and dry place and away from direct sunlight.
- Keep in 5 - 30 °C temperature and 40 - 75% humidity.
- Keep the bags closed .

Precaution

- Use under supervision of a veterinarian or nutritionist.
- Keep out of reach of children.

Packaging

10 and 25 kg bags
