Unicocckill®

Broad-spectrum disinfectant solution based on Phenolic components, effective against Coccidiosis

For Veterinary Use Only

Composition

Each liter of solution contains:

P-Chlorocresol 250 g

Target Animal

Poultry and livestock

Indication

- Unicocckill® is a powerful disinfectant that is effective against bacteria, viruses (including Avian Influenza and Newcastle Disease) and fungi.
- It is also effective against Coccidial Oocysts, Cryptosporidium, Bacterial Spores, Mycobacterium, Endoparasites and also Ectoparasites such as Red Mite eggs and Worm Eggs.

Dosage and Administration

indication	Concentration and Contact time
Disinfection of all types of Bacteria, Viruses and Fungi	2% for 30 mins
General disinfection	2% for 30 mins
Disinfection of all types of worm eggs	2% for 2 hrs.
Disinfection of Cryptosporidium	3% for 1 hr.
Disinfection of Coccidial Oocysts	3% for 4 hrs.
Disinfection of Red Mite Eggs	3% for 24 hrs.
Disinfection of Clostridium	4% for 1 hr.
Disinfection of Mycobacterium	4% for 3 hrs.
Disinfection of foot bath	2%-3%

In order to disinfect concrete surfaces and other smooth surfaces, at least 100 ml of diluted Unicocckill® solution is needed per square meter.

Storage

- Keep it in cool place and away from direct sunlight.
- Keep the lid of container closed.

Precaution

- Keep out of reach of children.
- It is Toxic if swallowed.
- Direct contact with skin and mucosal membranes may cause injuries, burns and damages.
- It is Toxic if inhaled.
- Protect eyes and skin by using suitable clothes, gloves, mask and eyeglasses while using the product.
- After use, thoroughly rinse all tools and plastic parts (e.g., high-pressure tools and hoses pipes) with a diluted alkaline detergent solution.
- Any traces of Formaldehyde or Iron (i.e., rust) in water can cause Chlorocresol to crystallize.
- Not known to be corrosive when used at recommended dilutions.
-

Packaging

1 Liter bottle
